Personal statement

A highly focused software developer with 3 years of commercial experience in software development with a big interest in the .NET platform. Organised, methodical and a keen eye for detail results in solid coding and producing the expected outcome on time. Understanding client requirements and communicating the progress of projects are core values in achieving long lasting business relationships. A great problem solver that thrives under pressure and eager to learn, easy going by nature and able to get along with both work colleagues and senior managers.

Education

University of Kingston

2011 – 2014

BSc (Hons) in Computer Science

Additional Information

Dissertation

Predominantly, I created an android application written in Java, for Kalamata city which provides information and assistance for a specific geological area and try to make people's trip easier in terms of finding information about what they need such as hotels, restaurants, attractions etc. depending on their location. The users could write reviews about the places they were visiting, rate, view and upload photos. The application was written in Java programming language and used an SQL database in order to retrieve and display information such as the map and the places marked on the map. It was a challenging project as there were a lot of pieces integrated together to provide good services to the users. The application was not published on the android market.
